Movies R US

Use Case Realizations

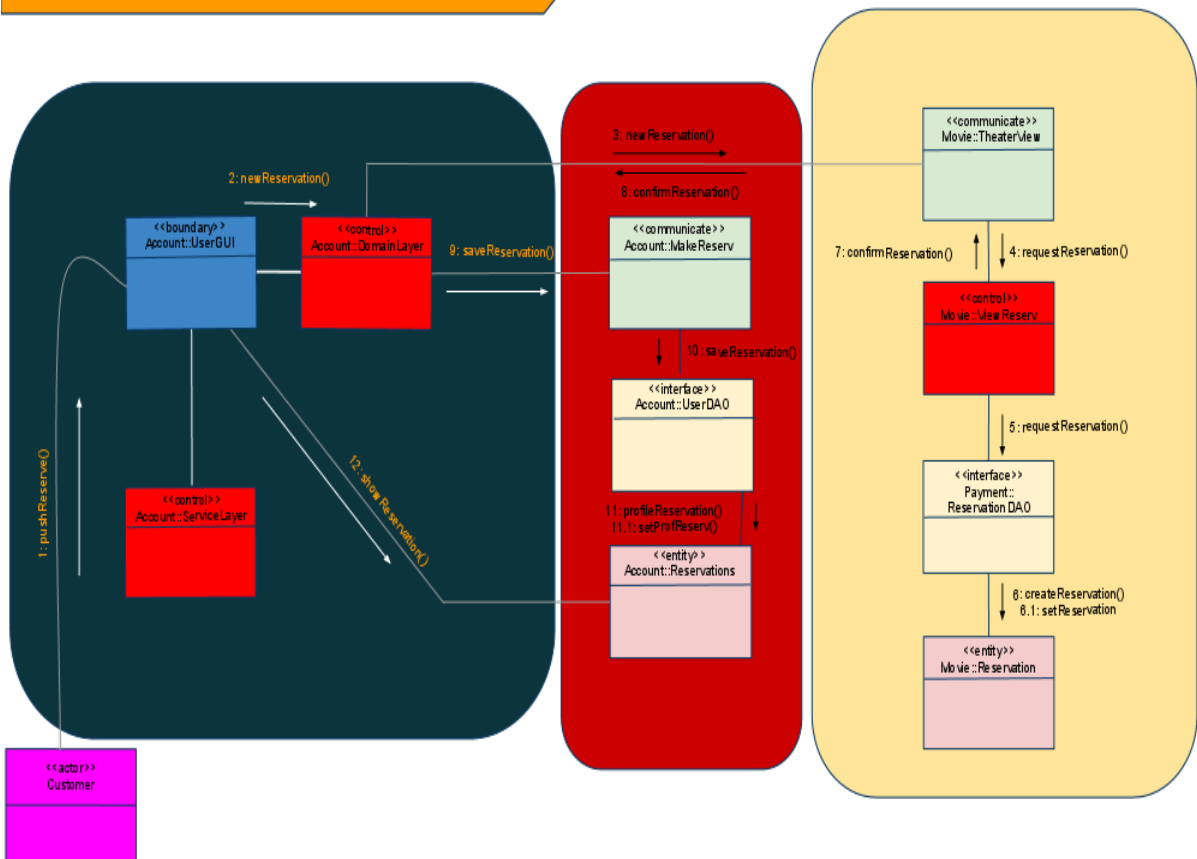

Introduction: Movies R US is broken up into four Objects: Account, Movie, Payment, and Report. These Objects all contain a variety of packages containing Realized Use Case that are described below. Full sizes images may be downloaded from the Team-C forum or viewed here in [Google Docs](#). The SRS which accompanies these USE Cases may be found here: [SRS](#). This document may also be retrieved for download in a variety of formats from here: [Realizations](#).

Object Account handles all actions concerning the user profile. Therefore anytime the Employee or the Customer uses the web application, kiosk or web based application at the register they are loading and utilizing their profile through Account.

Account::MakeReserv

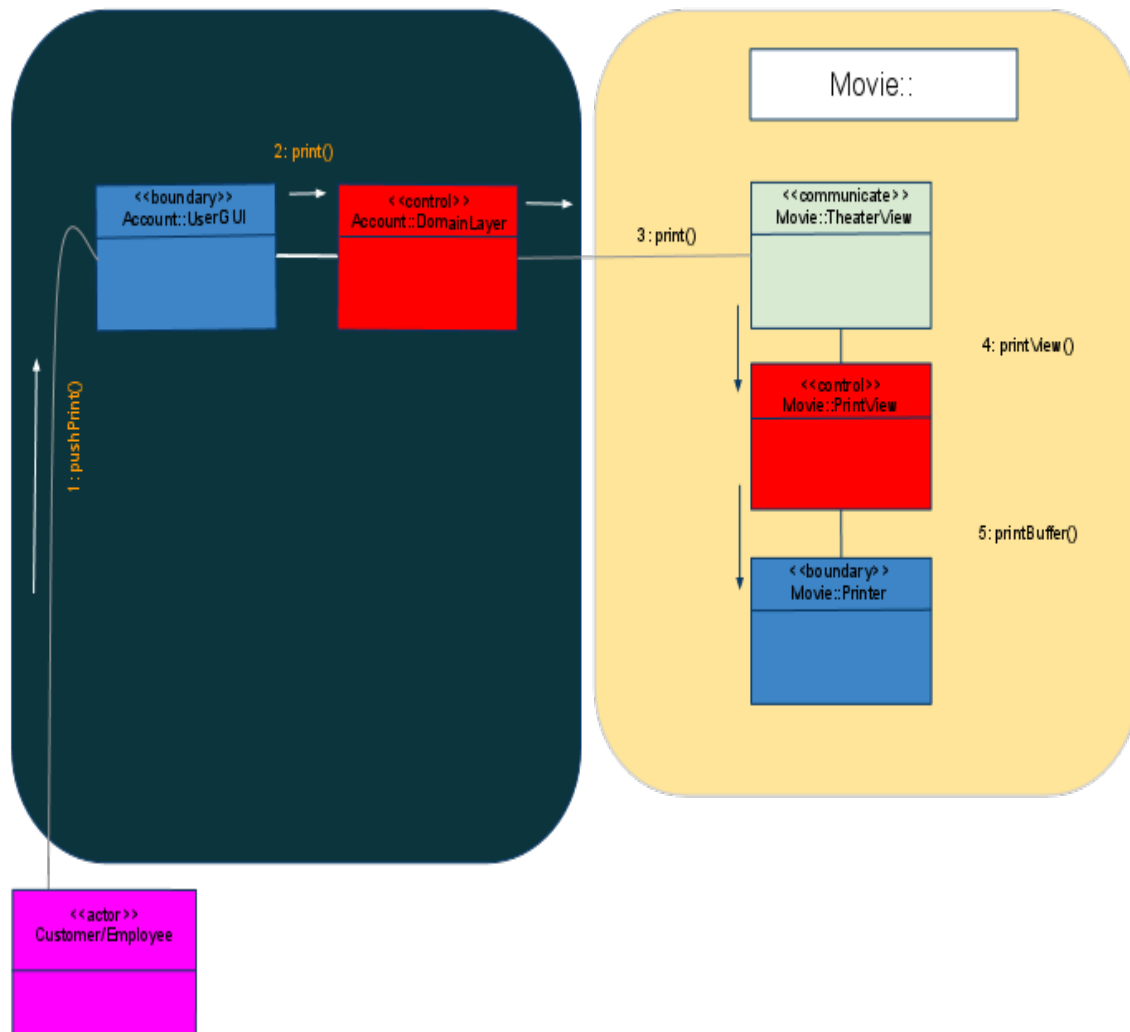

ID:2

Object Movie contains packages for both Customer and Employee to retrieve items such as tickets and gift cards. This is only for retrieval of said items not creation of tickets and gift cards but these packages handle requesting views of these items. A package is also included for printing views after loading. The Movies and Schedule of movies may be viewed here by the Customer while the Employee may view and edit both. To generalize Object Movie handles the most common viewing and editing of views for both the Customer and Employee. Each Use Case has a very short and specific Use to keep package simple.

Movie::GetTicket

ID:8

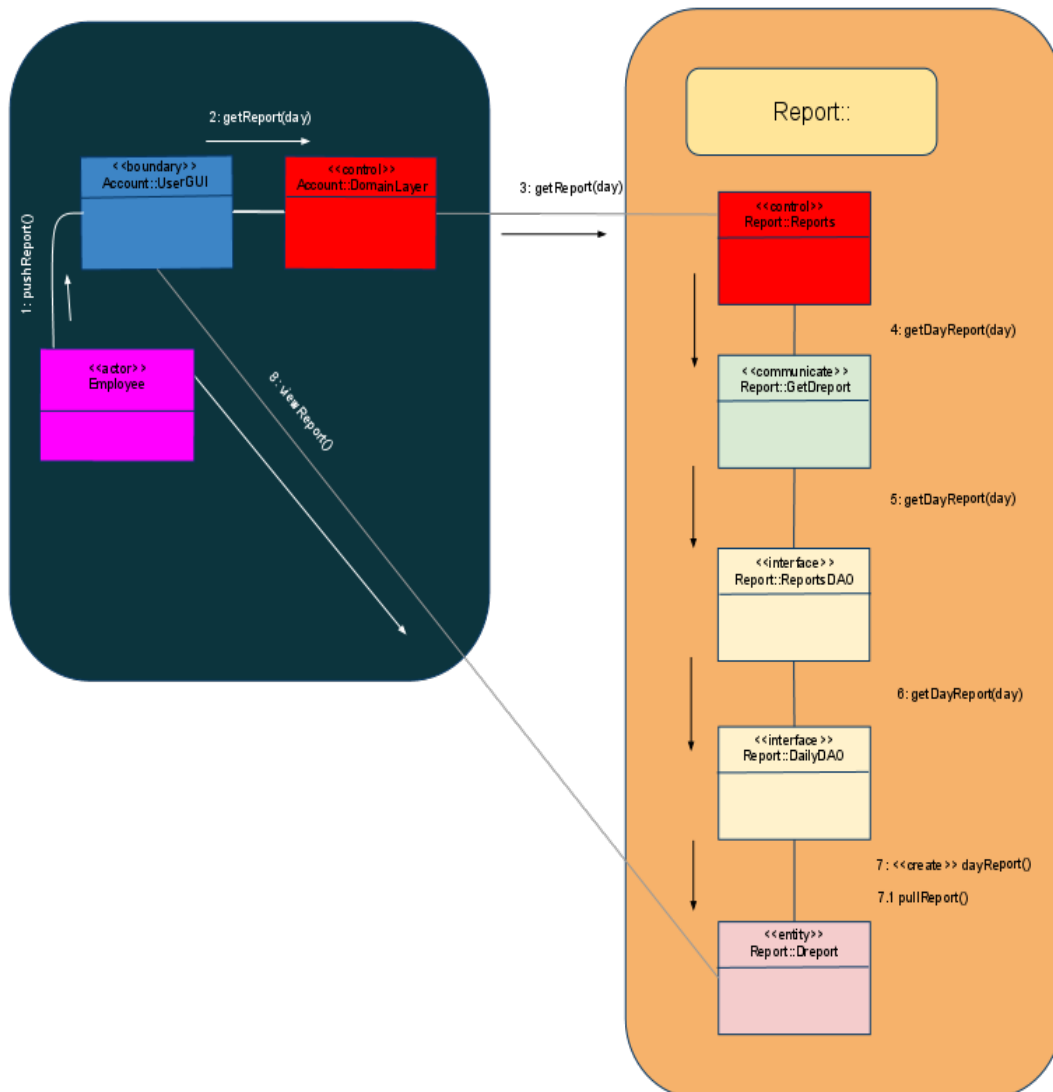

Movie::GetGiftCard

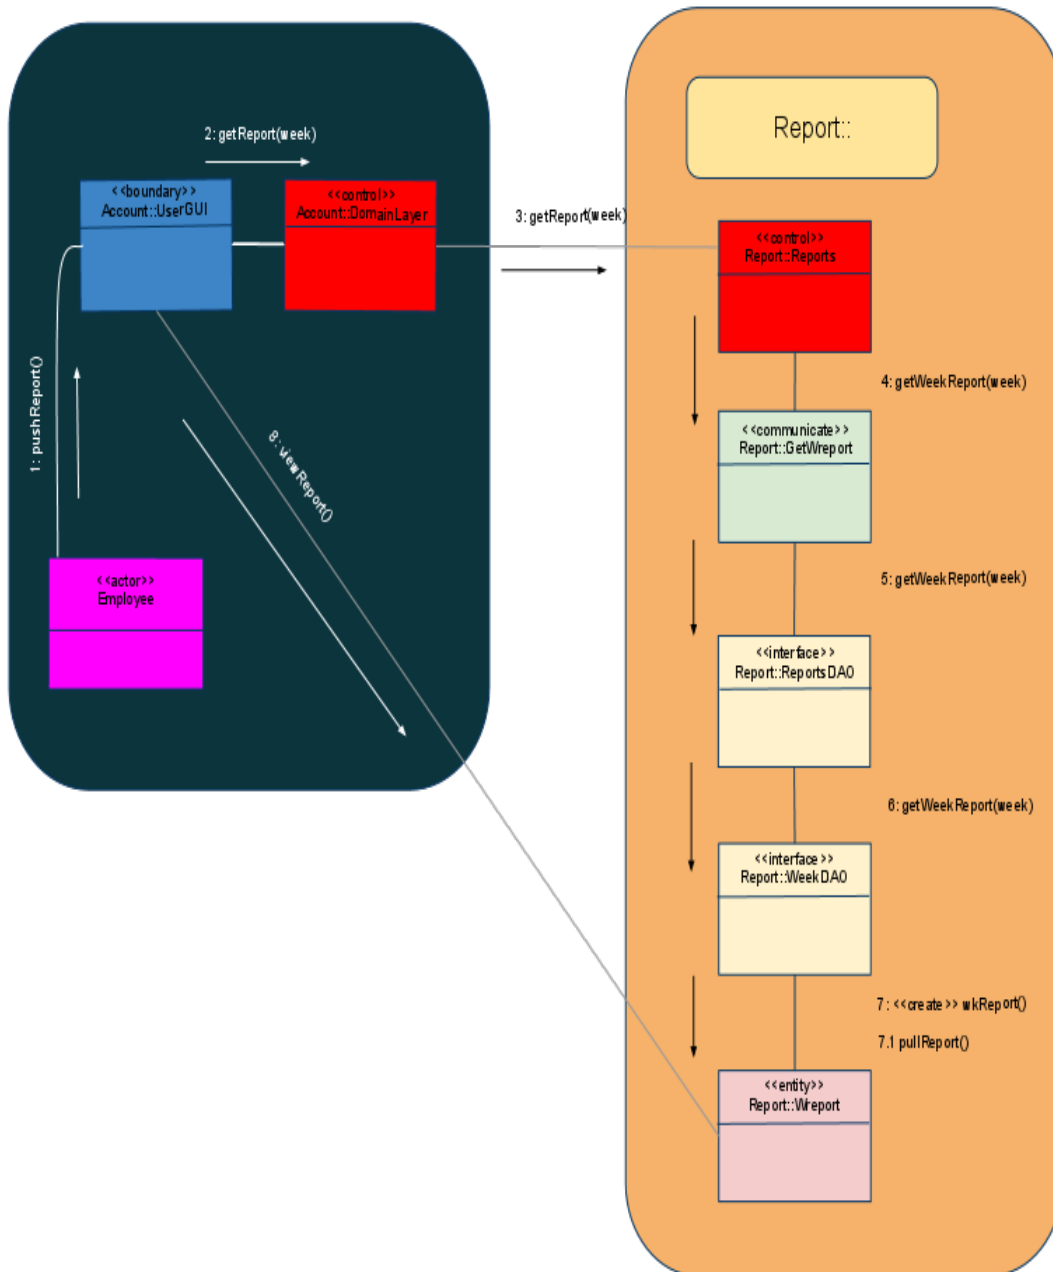

ID:9

Object Report contains three simple packages that handle reading of reports for the Employee. It is assumed that the business server handles the creation of these reports so it only handles reading the reports as properly labeled. Each use case handles reports of a particular block of time such as daily, weekly and monthly.

Report::GetDreport

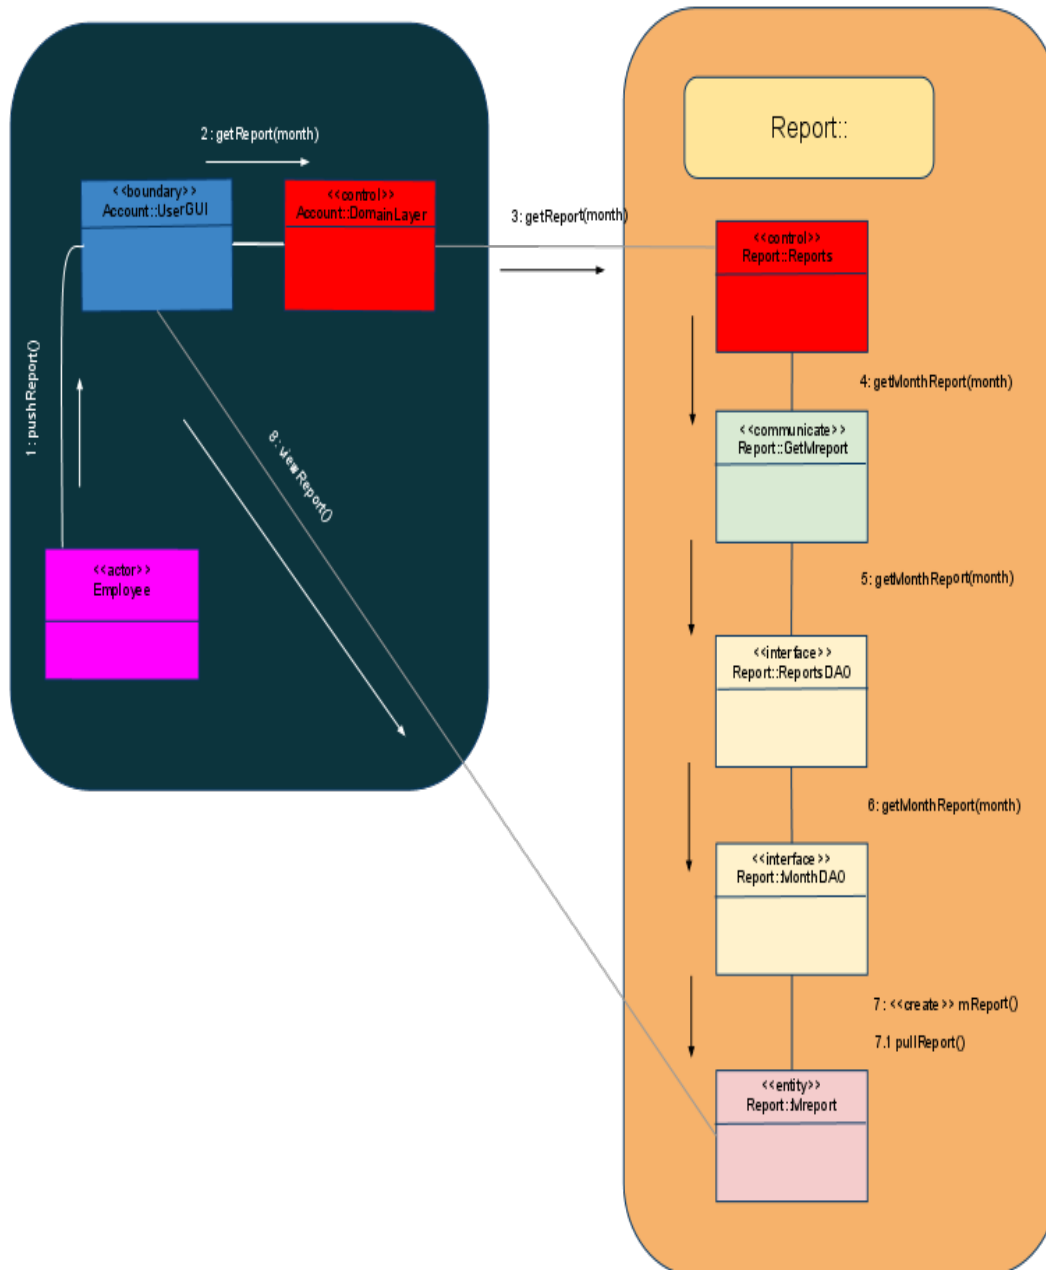

Report::GetWreport

Report::GetMreport

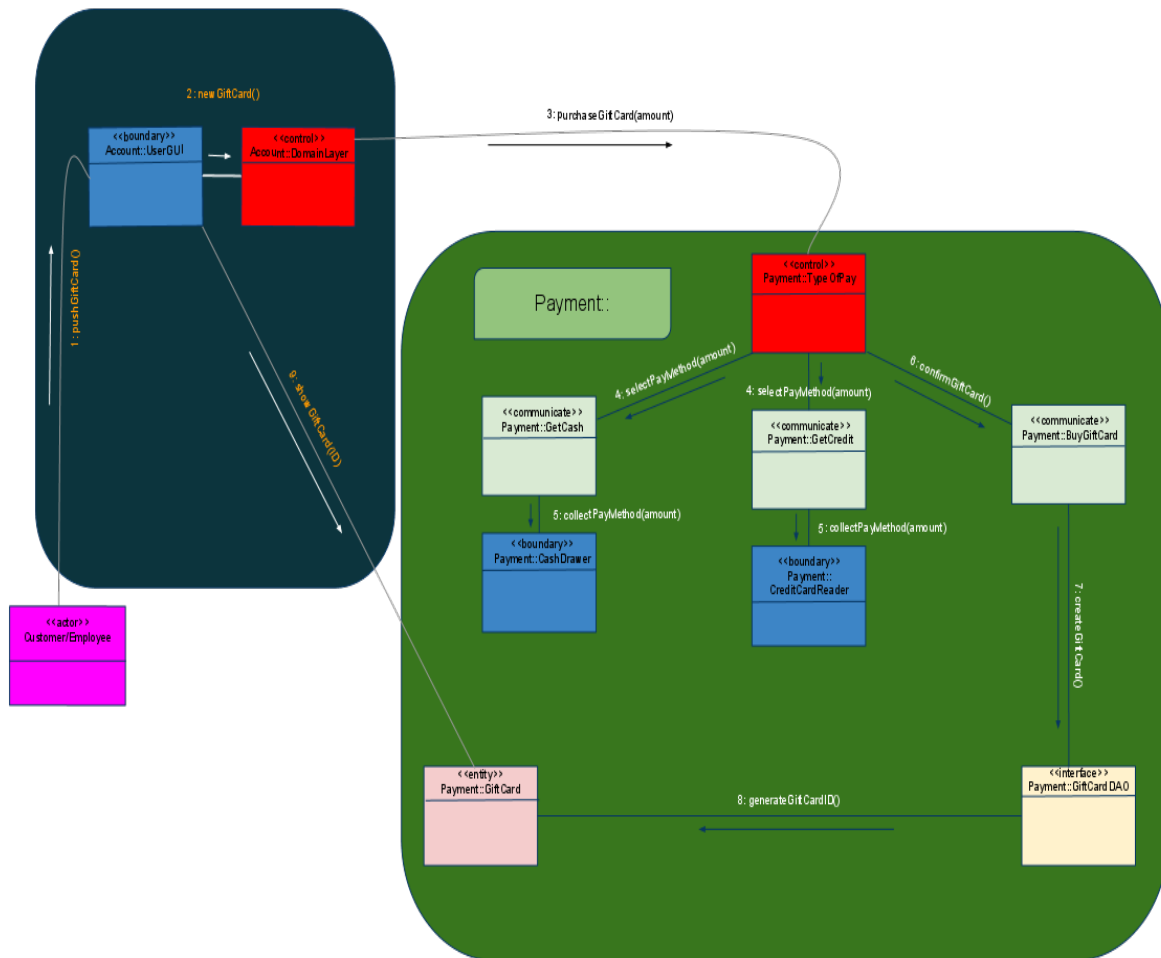

Object Payment is the Object which handles financial transactions and stores these purchases in a data object. Payment does not handle the retrieval of tickets or Gift Cards but only the purchasing aspect and creation or removal of these data objects. However, notice Object Movie does in fact retrieve purchase information from the DAO and data objects created by Payment packages.
